

# MF850 Homework 3

Problem 3.1 (a) we have  $\min_v \{-v \partial_y V + b v \partial_s H + (c + k v) v\}$

$$FOC \Rightarrow (k v^2 + (S - \partial_y V) v)' = 0$$

$$\Rightarrow 2 k v = -(S - \partial_y V(s, y))$$

$$\Rightarrow v^* = \frac{1}{-2k} (S - \partial_y V(s, y))$$

(b) we have  $V(s, y) = y s + y^2 h(s)$

$$\begin{cases} \partial_s V(s, y) = y^2 + y^2 h'(s) \\ \partial_{ss} V(s, y) = y^2 h''(s) \\ \partial_y V(s, y) = s + 2 y h(s) \end{cases} \Rightarrow \begin{cases} \frac{1}{2} \sigma^2 y^2 h'' + \phi y^2 + \min_v \{-v s - 2 y h v + s v + k v^2\} = 0 \\ y^2 (\frac{1}{2} \sigma^2 h'' + \phi) + \min_v \{-2 y h v + k v^2\} = 0, \quad v^* = \frac{-2 y h}{-2k} \end{cases}$$

$$\Rightarrow y^2 (\frac{1}{2} \sigma^2 h' + \phi - \frac{h^2}{k}) = 0, \quad y^2 \neq 0$$

$$\Rightarrow \frac{1}{2} \sigma^2 h'' + \phi - \frac{h^2}{k} = 0$$

$$\Rightarrow \frac{1}{2} \sigma^2 h'' + \phi + \min_v (-2 v h + k v^2) = 0, \quad \text{where } v^* = \frac{1}{k} h(s)$$

$$\text{And } h(\bar{s}) = a$$

(c) For the details, please see the code file
